The first of its kind, the Gunbot G1 by Senkaishu Limited is a salute to enduring military craftsmanship. Its primary weapon, a robust 30cal Minigun, offers sustained damage, especially when Overclocked. Perfect for establishing a quick, revolving firing line or pushing crucial positions, the G1 is a well-rounded unit for any ground combat scenario.

Born from the shadows of a world adapting to remote warfare, the Gunbot G1 was Senkaishu Limited's answer to a growing need for durable, autonomous combat units. Its inception was amidst the dawn of microchips, a time when battlefields were becoming faster and smarter. The Gunbot G1 may not boast the complex capability of higher-tech units, but in the annals of ground combat, it's celebrated as a symbol of persistence. After 600 years of improvements, it is still a top choice among Aces.
